Salesforce Application Demonstration Document

Prepared from the provided demonstration video

Application Platform	Salesforce Developer Edition
Application Name	TheChaiShop&Co
Main Areas Demonstrated	Customer Accounts, Employer Accounts, Enterprise Accounts, Email Template, Flow Builder and Dashboard
Document Purpose	To describe the major screens and functionality demonstrated in the video

Table of Contents

1. Introduction
2. Application Overview
3. Customer Accounts
4. Employer Accounts
5. Enterprise Accounts
6. Emergency Alert Email Template
7. Flow Builder
8. Dashboard and Sales View
9. Overall Workflow
10. Conclusion

1. Introduction

TheChaiShop@Co is demonstrated as a Salesforce-based business application. The video shows how different business records and Salesforce features can be organized in one application. The demonstration includes customer information, employee information, enterprise information, email templates, automation-related configuration, and a dashboard for viewing sales information.

2. Application Overview

The application is accessed through Salesforce Developer Edition. The navigation bar provides separate sections for Employer Account, Customer Accounts, Enterprise Accounts, Reports, Dashboards and Chatter. This structure allows users to move between operational records and analytical information from a single interface.

Module	Purpose
Customer Accounts	Stores and displays customer account records.
Employer Account	Stores employee-related details such as gender, phone, email, date of birth, designation and salary.
Enterprise Accounts	Maintains enterprise/business information and related customer or sales details.
Email Template	Provides a reusable emergency alert email message.
Flow Builder	Provides the Salesforce automation workspace used in the application.
Dashboards	Displays summarized business information such as customer versus enterprise sales.

3. Customer Accounts

The Customer Accounts section displays a list of customer records. In the video, the Recently Viewed list contains a customer record named 'Archana tea customer'. The page also provides actions such as New, Import, Change Owner and Assign Label. These options support basic customer-record management.

The screenshot displays the Salesforce Developer Edition interface. The top navigation bar includes a 'Developer Edition' button and a search bar. Below this, the main navigation bar shows 'TheChaiShop&Co' and several menu items: 'Employer Account', 'Customer Accounts' (which is selected), 'Enterprise Accounts', 'Reports', 'Dashboards', 'Chatter', and 'Emergency alert email'. The 'Customer Accounts' section is open, showing a 'Recently Viewed' list. The list contains one item, 'Archana tea customer', with a checkbox and a dropdown arrow. Above the list are buttons for 'New', 'Import', 'Change Owner', and 'Assign Label'. A search bar for the list is also present. The bottom of the screen shows a Windows taskbar with various icons and a system tray with weather and time information.

4. Employer Accounts

The Employer Account page displays an employee record named 'Demo employee'. The visible details include gender, phone number, email ID, date of birth, Aadhaar number, PAN details, designation and salary. The record page also provides actions for creating a new contact, editing the record and creating a new opportunity.

5. Enterprise Accounts

The Enterprise Accounts section contains enterprise-level records. The video shows a record named 'Demo enterprise'. Its details include enterprise account name, enterprise name, owner, phone number, email ID, address and type of items. The page also includes Related and Details tabs and an Activity panel.

6. Emergency Alert Email Template

The video also demonstrates an email template named 'Emergency alert email'. The template contains information such as the template name, description, folder, subject and HTML message content. The subject shown is 'emergency alert notification'. The message begins with a user greeting and informs the recipient that an emergency situation has been detected. The template can be edited, cloned or deleted.

7. Flow Builder

During the demonstration, Salesforce Flow Builder is opened as part of the application configuration. Flow Builder is used in Salesforce to design automated business processes by connecting actions and logic. In this application, it forms part of the automation/configuration area shown in the video.

8. Dashboard and Sales View

The Dashboard section contains a dashboard named 'Customer Vs Enterprise Sales'. The dashboard is shown in the Recent dashboards list and is stored under Private Dashboards. This provides a centralized place for viewing business information and comparing sales-related data between customer and enterprise categories.

9. Overall Workflow

The demonstrated application can be understood as a connected Salesforce workflow:

1. Open the TheChaiShop&Co Salesforce application.
2. Manage customer records through Customer Accounts.
3. Maintain employee information through Employer Account.
4. Maintain business-level information through Enterprise Accounts.
5. Create and manage reusable email templates for notifications.
6. Use Salesforce automation tools such as Flow Builder.
7. Use dashboards to view summarized business and sales information.

10. Conclusion

The video demonstrates a structured Salesforce application that combines record management, communication templates, automation configuration and dashboard-based reporting. The use of separate account sections makes business data easier to organize, while the email template and Flow Builder support automation-oriented operations. The dashboard provides a summarized view of sales information for business analysis.
